HRM Things

Admin Panel Fixes:
- Check In/Out is already working on Dashboard for employees, we just need to verify there selfie, location
- Employees can do Break In/Out and we will calculate their break time and number of breaks and timings of each break, also we will subtract this break time from their total working time.
- Timesheets are already coming in Timesheets section when you login and Company we just need to make approval system. Company will approve the time [and they can also update time, which is already working]. Company Can Check In/Out Break In/Out anyone at anytime.
-

Apis Documentation:
- POST: Login Api for Manager/Company Owner to Login {email, password}
- GET: List of All Employees {send all the details including name, email, phone, departments, role, etc complete data what we have in DB}
- Api for Employees to Verify There Password
- Api to Clock In/Out with selfie, and location/department option.
- Api for Break In/Out and Get Today's Breaks time etc [list of breaks, from and to time, total time of break used]
